

A LIST OF THE CHRYSOMELID SPECIMENS  
PRESERVED IN THE OSAKA MUSEUM  
OF NATURAL HISTORY I  
(INSECTA: COLEOPTERA)\*

Shinsaku KIMOTO

and

Isamu HIURA

The Osaka Museum of Natural History

During the past ten years, taxonomic study on the Japanese Chrysomelidae has been rapidly progressed. However, the faunistic research on the local faunas has not been well done. The collection preserved in the Osaka Museum of Natural History is one of the most important chrysomelid collections, especially ones from the Kinki District. This is the first paper based on the result of our study on the specimens of Chrysomelidae preserved in the Osaka Museum of Natural History. One species here treated is to be recorded for the first time from Japan. Some new species are not treated here and shall be included in the type series which are to be described by KIMOTO in his revisional work on the Japanese Chrysomelidae.

Before going further, we would like to express our hearty thanks to Prof. K. YASUMATSU and Prof. H. KUROKO, Kyushu University, and Mr. Y. TSUTSUI, Director of the Osaka Museum of Natural History, for affording us the facilities to the study and for their kind encouragement.

Subfamily ORSODACNINAE

*Orsodacne arakii* CHÛJÔ

NAGANO: 2 exs., Ichinomata, N. of Kamikôchi, 5. viii. 1954 (Y. Shibata).
